Volume 55 No. 1 January 1998

Personal perspective/Minireview

Three decades of research in bacterial photosynthesis and the road leading to it: A personal account
G. Feher **1–40**

Regular papers

Comparative investigation of the appearance of primary chlorophyllide forms in etiolated leaves, prolamellar bodies and prothylakoids
O. Belyaeva, C. Sundqvist **41–48**

The spectroscopic and photochemical properties of locked-15,15′-*cis*-spheroidene in solution and incorporated into the reaction center of *Rhodobacter sphaeroides* R-26.1
J.A. Bautista, V. Chynwat, A. Cua, F.J. Jansen, J. Lugtenburg, D. Gosztola, M.R. Wasielewski, H.A. Frank **49–65**

Formation of the tight-binding inhibitor, 3-ketoarabinitol-1,5-bisphosphate by ribulose-1,5-bisphosphate carboxylase/oxygenase is O_2-dependent
G. Zhu, H.J. Bohnert, R.G. Jensen, G.F. Wildner **67–74**

New domain-locking disulfide in a bacterial malate dehydrogenase strengthens proposed mechanism for reductive activation of the chloroplast enzyme
E.H. Muslin, F.J. Stevens, L.E. Anderson **75–82**

Evidence for an O_2-barrier in the light-harvesting chlorophyll-*a*/*b*-protein complex LHC II
D. Siefermann-Harms, A. Angerhofer **83–94**

On the long-wavelength spectral forms of chlorophyll *a* in Photosystem I: Spectroscopic and immunological investigations on a greening mutant of the green alga *Scenedesmus obliquus*
H. Schiller, M. Hühn, H. Dau **95–107**

Chlorosome development in *Chloroflexus aurantiacus*
M. Foidl, J.R. Golecki, J. Oelze **109–114**

Announcement **115**

CONTENTS Volume 55 Nos. 2–3 March 1998

Special Issue: **REACTION CENTERS OF PHOTOSYNTHETIC PURPLE BACTERIA: STRUCTURE, SPECTROSCOPY, DYNAMICS**

Guest Editors: **JACQUES BRETON, ELIANE NABEDRYK and ANDRÉ VERMÉGLIO**

Preface **117**

Identification of proton transfer pathways in the X-ray crystal structure of the bacterial reaction center from *Rhodobacter sphaeroides*
E.C. Abresch, M.L. Paddock, M.H.B. Stowell, T.M. McPhillips, H.L. Axelrod, S.M. Soltis, D.C. Rees, M.Y. Okamura, G. Feher **119–125**

Water clusters in the reaction centre of *Rhodobacter sphaeroides*
G. Fritzsch, L. Kampmann, G. Kapaun, H. Michel **127–132**

Crystallographic studies of mutant reaction centres from *Rhodobacter sphaeroides*
P.K. Fyfe, K.E. McAuley-Hecht, J.P. Ridge, S.M. Prince, G. Fritzsch, N.W. Isaacs, R.J. Cogdell, M.R. Jones **133–140**

On the efficiency of energy transfer and the different pathways of electron transfer in mutant reaction centers of *Rhodobacter sphaeroides*
M.E. van Brederode, J.P. Ridge, I.H.M. van Stokkum, F. van Mourik, M.R. Jones, R. van Grondelle **141–146**

Oscillations of the energy gap for the initial electron-transfer step in bacterial reaction centers
W.W. Parson, Z.T. Chu, A. Warshel **147–152**

Temperature dependence of the primary electron transfer reaction in pigment-modified bacterial reaction centers
H. Huber, M. Meyer, H. Scheer, W. Zinth, J. Wachtveitl **153–162**

The spectroscopy of the low-lying bands in the special-pair radical-cations of photosynthetic reaction centres
J.R. Reimers, M.C. Hutter, N.S. Hush **163–171**

Inter-chromophore interactions in pigment-modified and dimer-less bacterial photosynthetic reaction centers
L.J. Moore, S.G. Boxer **173–180**

Linear dichroism of membrane-bound reaction centers from *Rhodobacter sphaeroides*: Alterations of the B band induced by site-specific mutations
M.H. Vos, C. Rischel, J. Breton, J.-L. Martin, J.P. Ridge, M.R. Jones **181–187**

Pulsed ENDOR of the photoexcited triplet states of bacteriochlorophyll *a* and of the primary donor P_{865} in reaction centers of *Rhodobacter sphaeroides* R-26
F. Lendzian, R. Bittl, W. Lubitz **189–197**

Effects of zwitterionic detergents on the electronic structure of the primary donor and the charge recombination kinetics of $P^+Q_A^-$ in native and mutant reaction centers from *Rhodobacter sphaeroides*
F. Müh, C. Schulz, E. Schlodder, M.R. Jones, J. Rautter, M. Kuhn, W. Lubitz **199–205**

A comparative study of conserved protein interactions of the primary electron donor in photosynthetic purple bacterial reaction centers
A. Ivancich, T.A. Mattioli **207–215**

An investigation of the light-induced spin polarization in reaction centres of *Rhodobacter sphaeroides* Y
A. van der Est, F. Reiss-Husson, D. Stehlik **217–225**

Free energy dependence of the direct charge recombination from the primary and secondary quinones in reaction centers from *Rhodobacter sphaeroides*
J.P. Allen, J.C. Williams, M.S. Graige, M.L. Paddock, A. Labahn, G. Feher, M.Y. Okamura **227–233**

Delayed fluorescence study on $P^+Q_A \rightarrow P^+Q_A^-$ charge separation energetics linked to protons and salt in reaction centers from *Rhodobacter sphaeroides*
K. Turzó, G. Laczkó, P. Maróti **235–240**

Characterization of photosynthetic reaction centers with specific isotope labels
J. Lugtenburg, H. de Groot **241–245**

Site-specific isotope labeling demonstrates a large mesomeric resonance effect of the methoxy groups on the carbonyl frequency in ubiquinones
C. Boullais, E. Nabedryk, J.-R. Burie, M. Nonella, C. Mioskowski, J. Breton **247–252**

A quantum chemical investigation of structures, vibrational spectra and electron affinities of the radicals of quinone model compounds
M. Nonella **253–259**

Step-scan FTIR spectroscopy resolves the $Q_A^-Q_B \rightarrow Q_AQ_B^-$ transition in *Rb. sphaeroides* R26 reaction centres
R. Brudler, K. Gerwert **261–266**

Resolution of electron and proton transfer events in the electrochromism associated with quinone reduction in bacterial reaction centers
D.M. Tiede, L. Utschig, D.K. Hanson, D.M. Gallo **267–273**

Symmetry-related mutants in the quinone binding sites of the bacterial reaction center – the effects of changes in charge distribution
D.K. Hanson, M. Schiffer **275–280**

Characterization of second site mutations show that fast proton transfer to Q_B^- is restored in bacterial reaction centers of *Rhodobacter sphaeroides* containing the Asp-L213 → Asn lesion
M.L. Paddock, M.E. Senft, M.S. Graige, S.H. Rongey, T. Turanchik, G. Feher, M.Y. Okamura **281–291**

Direct evidence of structural changes in reaction centers of *Rb. sphaeroides* containing suppressor mutations for Asp L213 → Asn: A FTIR study of Q_B photoreduction
E. Nabedryk, J. Breton, M.Y. Okamura, M.L. Paddock **293–299**

Proton uptake upon quinone reduction in bacterial reaction centers: IR signature and possible participation of a highly polarizable hydrogen bond network
J. Breton, E. Nabedryk **301–307**

Effect of temperature and surface potential on the electrogenic proton uptake in the Q_B site of the *Rhodobacter sphaeroides* photosynthetic reaction center: $Q_A^-Q_B^- \rightarrow Q_AQ_BH_2$ transition
O.A. Gopta, D.A. Cherepanov, A.Y. Mulkidjanian, A.Yu. Semenov, D.A. Bloch **309–316**

Time-resolved electron transfer at the donor side of *Rhodopseudomonas viridis* photosynthetic reaction centers in whole cells
F. Rappaport, D. Béal, A. Verméglio, P. Joliot **317–323**

Electron transfer reactions of high-potential cytochromes in the reaction centre of *Chromatium tepidum*
F. Drepper, T. Saito, M. Kobayashi, T. Nozawa, P. Mathis **325–330**

Kinetics of electron transfer between the tetrahemic cytochrome and the special pair in isolated reaction centers of *Roseobacter denitrificans*
D. Garcia, P. Mathis, A. Verméglio **331–335**

Light-induced conformational change at low temperature in the coordination of heme *c*-556 in the reaction center of *Rhodopseudomonas viridis*
J.M. Ortega, F. Drepper, P. Mathis **337–341**

Role of HiPIP as electron donor to the RC-bound cytochrome in photosynthetic purple bacteria
L. Menin, J. Gaillard, P. Parot, B. Schoepp, W. Nitschke, A. Verméglio **343–348**

Comparative analysis of the primary structure of the reaction center-bound cytochrome subunit in purple bacteria
K.V.P. Nagashima, Y. Sakuragi, K. Shimada, K. Matsuura **349–355**

Chromatophore heterogeneity explains phenomena seen in *Rhodobacter sphaeroides* previously attributed to supercomplexes
A. Crofts, M. Guergova-Kuras, S. Hong **357–362**

The reaction centre of the photounit of *Rhodospirillum rubrum* is anchored to the light-harvesting complex with four-fold rotational disorder
H. Stahlberg, J. Dubochet, H. Vogel, R. Ghosh **363–368**

A *puhA* gene deletion and plasmid complementation system for facile site directed mutagenesis studies of the reaction center H protein of *Rhodobacter sphaeroides*
X-Y. Chen, V. Yurkov, M.L. Paddock, M.Y. Okamura, J.T. Beatty **369–373**

Light reflections III
G. Feher **375–378**
